Instructive literature on alfalfa growing, silos, lime in agriculture, peanut and soya bean oil manufacture, will be mailed to any address upon request.

Address—L. P. BELLAH, General Agent.

Nashville,

Tennessee.

Engage- ment Ring

By MYRTLE LEE

(Copyright, 1918, by the Western Newspaper Union.)

She had the daintiest, most shapely hand ever seen, and Earle Warren recognized it and flashed an admiring glance at the same as Neva Burdette sat drawing pictures for her little brother Ned on a rustic table in the garden pagoda. There had been a lively, merry lawn party, and awaiting tea there was a breaking up into various groups. Unostentatiously and from choice Earle had kept near to Miss Burdette and her close friends, Alice and Muriel Dodge, and their escorts. Neva had been his partner at times and it had naturally followed that they had remained together.

Little Ned had, however, discovered somebody's sketch book, had extracted some loose blank sheets and was insistent that Aunt Neva should amuse him. She portrayed his favorite engine and train of cars, a horse, an automobile and an airplane. Earle indicated an interest in this pictorial display, but Miss Burdette told Ned to hold his collection safe and tight, objecting to its presentation on account of alleged crudeness.

"Just one more sheet," finally announced Ned. "Oh, aunt! won't you let me draw something for you?"

"Certainly, dear," assented Neva.

Ned spread the sheet on the table. "Now," he said, "I want to show you something we do in school. You just spread your hand down tight over the paper. That's it. Now don't you move it," and with pride and accuracy Ned proceeded to trace the skeleton outlines of fingers and hand clear to the wrist. Then with satisfaction he held it up to her view.

"Isn't that fine?" he challenged, and Neva smiled her approval, and just then some one called to her from a group a little distance away, and she flitted with a conscious flush as her glance met that of Earle, betokening interest manifestly in all her movements.

"You can have this, Mr. Warren, because you're such a good friend to Aunt Neva," observed little Ned generously, extending the pencilled sheet. Then he ran away after a kitten crossing the path, and Earle casually scanned the very fine outline of the delicate hand of the peerless creature of whom he was indeed the good friend, and secretly hoped to make some day a dearer one. Idly he took out his pencil and began mending the breaks Ned had made in the outlines. The pencil point crossed the third finger of the left hand and rested there. In a whimsical frame of mind Earle began to trace a circle about the base of that certain finger. He smiled to himself as he pleasantly recalled that Miss Burdette wore no jewelry, predicting hopefully that she was heart free. He gemmed the ring with a very fair diamond and started suddenly as a voice spoke directly at his ear, and there was mischief-eyed Alice Dodge leaning past his shoulder.

"Drawing a ring on Neva's finger!" fluttered this very clever young woman. "Why, and you have given her an engagement ring, too?"

"She deserves one," observed Earle quickly.

"Bolder and bolder! Oh, I shall tell her!"

"Wait! wait!" dissuaded Earle, but the winsome sprite flashed away with a tantalizing laugh.

Miss Alice did nothing of the kind. She was an observant creature and practiced as to match-making. It had been no task whatever for her to discover that Neva and Earle were in love with each other, but that her girl friend was shy and retiring and the lover seeking encouragement.

"I shall hurry things along," vehemently declared Alice, and a day or two later had an opportunity for placing a plan she had formed in operation. Neva had arranged to give a party to which all of her friends, including Earle, had been invited. Upon the day preceding it Alice said to her:

"Now, Neva, dear, you want to shine your brightest on this occasion. I am going to help you dress for the event and here—this will emphasize your magnificence," and she pressed a ring upon Neva's hand.

"Oh, no!" demurred Neva instantly. "Why, you have placed it on the engagement finger!"

"And aren't you longing like every other live girl we know to have one there to stay?" and Neva blushed her prettiest. Both of them met Earle the next day as they passed down the street. As he greeted them he noticed the brilliant on Neva's finger.

The party was an enjoyable occasion to all save the hostess, for Earle did not appear, nor did he come near the house for several days later.

A week after the party he met Neva on the street. It had been a wretched seven days for him.

"If you will stop for a moment at the Dodge home while I return to Alice this ring she loaned to me to wear at the party I will be very glad to accompany you," said Neva.

The sky had been cloudy. Just then the sun came out. Earle's face had been grim and anxious. Of a sudden it glowed with a rapturous joy.

"A ring from myself shall encircle that fair finger before any one else gets ahead of me!" he fervently resolved, and when those two returned from the stroll along the lake motor-department delight welled up in their hearts.

DAIRY

TANKS TO KEEP CREAM COOL

Can Be Purchased From Dealers in Dairy Supplies, or They May Be Made on the Farm.

(Prepared by the United States Department of Agriculture.)

On most farms cream can be cooled most effectively by the use of cold water. In order to facilitate the cooling various types of tanks have been devised. Such tanks can be purchased from dealers in dairy supplies and sometimes from the local hardware merchant, or they may be made on the farm. A cooling tank should be large enough to hold at least two cream cans in order that the newly separated cream may be cooled in a can separate from that previously gathered.

In order to keep the cream cool it is necessary to change the water several times a day. For this reason the tank should be situated between the well and the stock tank so that all water pumped for the stock passes through the cooling tank, thence to the stock tank.

Of whatever design the cooling tank may be it should have a tight cover to keep out the heat, and for the same reason it is advisable to place it in the dairy house or under a shed so that the sun cannot shine directly upon it.

An excellent tank may be made of two-inch planed cypress boards, properly bolted together, painted on the outside and oiled on the inside; or, if it is desirable to keep the cost down to the minimum, a very simple and cheap cooling tank may be made from two or more oil or vinegar barrels—one for each can.

The pipe conducting the water into the tank should be about 1½ inches in diameter, and upon entering the

A Serviceable Cooling Tank.

tank by means of an ell and a short piece of pipe, should turn down to within a few inches of the bottom so that the cold water may be conducted to the bottom, forcing the warmer water through the outlet pipe. Cream cans should stand on cleats so that water may circulate under as well as around them. The outlet pipe should be about 1½ inches in diameter. Locknuts and sheet packing may be used to make tight joints where pipes enter and leave the tank.

When using a tank in which water is the cooling agent it must be borne in mind that the water should either flow through the tank continuously or be changed so frequently that the cream will be kept as cold as the well water.

GIVE SOIL MORE ATTENTION

When Dairymen Do This They Will Find Themselves Independent of Feed Dealers.

The time has come when dairy farmers must devote more attention to soil management and crop growing and less attention to balanced rations until they get their farms on a self-sustaining basis. When dairy farmers do this they will discover that they are independent of feed dealers in feeding the cows, and as the system is continued a few years they will create a surplus which can be utilized in feeding horses, beef cattle, sheep and hogs.

TIME FOR COWS TO FRESHEN

Most Favorable Months Are Those Beginning With November and Ending With March.

Investigations by Professor McCandlish of the dairy department of the Iowa Agricultural college indicate that cows freshening in August produce decidedly less milk during the year than cows freshening in any other month. The most favorable months for cows to freshen are those beginning with November and ending with March.

Two More Shopping Days BEFORE CHRISTMAS

Not a great many shopping hours, if you count them up. Each day gone by makes gift seeking less the joyous task it should be and more difficult of fulfillment. While we prepared for active selling a good many stocks and found to become more or less depleted as Christmas approaches, that's why we advocate early shopping. At all times, however, we wish to assure you of the store's heartiest co-operation with your plans.

Our handkerchiefs are the prettiest we have ever shown and we have a choice selection of both ladies' and men's hose, gloves and bath robes—all of which make lovely presents for your friends.

Do you wear a sweater when you skate? It not, you are missing half the pleasure of that exhilarating sport. A coat interferes with one's freedom of movement, but not so with a sweater. We are showing a beautiful line of sweaters and what could be more practical than a sweater as a Christmas gift?

We have handbags that make excellent gifts and most appreciated by those who travel and girls and boys who are at home for the holidays and can't you just picture just how happy they would be with a new traveling bag to take back to school with them? Fill these last few days with the Real Christmas Spirit.

This Store Wishes a Very
MERRY CHRISTMAS
and your Share of all the Joys that
attend this great Holiday.
